

Problem Statement

The objective of this project is to analyze product sales data using Power BI in order to extract actionable insights that can drive strategic business decisions.

Key Business Questions to Solve:

1. What is the best year for sales? How much was earned that year?
2. What was the best month for sales? How much was earned that month?
3. Which day of the week has the best sales?
4. What city had the highest number of sales?
5. What time should we display advertisement to maximize likelihood of customer's buying products?
6. What products are most often sold together?
7. What product sold the most? Why do you think it sold the most?
